Institutional decisions and approval requirements

Status: open. Nothing in this package is approved. No decision has been recorded, and this package does not create, presume or record any approval. "Who decides" names a role for the institution to fill. It does not presume that a particular person or office exists.

Decisions needed

Each decision is needed before the step it gates. The steps are in 03-adjudication-procedure.

ID	Decision	Why it is needed	Who decides (role)	Needed before
P1–P7	The seven academic policy questions (01-academic-policy-questions)	They decide how case judgments become references	Policy panel	Step 6, adjudication
I1	Name the coordinator, two reviewers per course, an adjudicator per discipline and the policy panel	The review needs qualified, independent people	Academic affairs	Step 1, before Part A is sent
I2	Approve, amend or reject the adjudication procedure (03-adjudication-procedure)	It is a proposal	Academic affairs, with quality assurance	Step 1, before Part A is sent
I3	Supply an official description of each EGA, or confirm that none exists	The system holds names only (P3)	The office responsible for the graduate attributes	Step 4, before the panel decides
I4	Confirm or replace the core-value names and definitions	They were copied from the website and are pending approval (P6)	The office responsible for the core values	Step 4, before the panel decides
I5	Supply official program outcomes and curricula for BSN, BSEd, BSA and BSHM, or confirm that these cases are judged as written	None is held; the cases use synthetic wording	The program chairs	Step 1, before Part A is sent
I6	Confirm the BSIT outcome list and its mapping to the EGAs	The system holds 10 outcomes from the institutional form and 9 transcribed from the IT 202 syllabus, numbered differently; the IT 204 template tags outcomes 11 and 14; the PO-to-EGA mapping is not confirmed	The BSIT program chair	Step 4, before the panel decides
I7	Say what the CLO level labels Introductory, Enabling, Demonstrating and Integration of Values mean, and whether a curriculum map with contribution levels exists	It bears on P1	Quality assurance	Step 4, before the panel decides
I8	Decide whether "insufficient information" is an acceptable reference answer, and how it is treated	Reviewers may choose it, and the software has a similar verdict ("insufficient evidence")	Policy panel	Step 6, adjudication

ID	Decision	Why it is needed	Who decides (role)	Needed before
I9	Decide when a case may carry more than one accepted answer	Some cases may be genuinely open to two readings	Policy panel	Step 6, adjudication
I10	Set the standard for an approved reference (for example both reviewers agree, or an adjudicated decision), and how unresolved cases are reported	It is needed to record decisions	Policy panel	Step 7, recording references
I11	Set limits on recommendations: may they raise an outcome's cognitive level beyond what its course and year need, change its subject matter, add content not needed for alignment, or propose removal?	Part B asks faculty to rate such proposals; the software needs a rule	Policy panel	Step 7, recording references
I12	Decide where approved references are kept, how they are versioned, who may change them, and whether reviewers are recorded by name or by code	Accountability and privacy; the forms collect a reviewer code	Academic affairs, with the data protection officer	Step 1, before Part A is sent
I13	Decide whether and how faculty review the protected held-out cases (other reviewers, no software output, sealed until the final run)	Their verdicts are also developer-written	Quality assurance	Before any held-out run
I14	Confirm that the checker's findings stay advisory, and that this review changes neither the official score, the pass mark of 79, the 47 rules nor the submission gates	This review changes no policy by itself	Academic affairs	Standing
I15	Decide whether collecting, recording and reporting the reviewers' judgments needs research-ethics clearance or the reviewers' informed consent (for example if results are reported in a thesis or capstone document), and obtain it if so	Judgments are collected from people and may be reported	The research ethics committee, or the office the institution designates	Step 1, before Part A is sent

Approval requirements

What an approval record contains. For each decision:

- the decision ID;
- the decision as worded by the approver (an option letter alone is not enough when the wording was changed);
- the approving role, and the approver's name if the institution records names;
- the date;
- a reference to the minutes, memo or resolution that records it;
- the programs or courses it applies to;
- the version of the documents decided on (this package: align-1-dev-adjudication-v2, built 2026-10-28);
- any conditions.

Where it is recorded. In the decision record under each policy question, or in `decision-and-approval-record.csv`, one row per decision. The data steward copies decisions exactly as recorded, and never completes or interprets one.

What does not count as approval: a draft or a recommendation in this package; a decision recorded without a role, a date and a reference; agreement between the reviewers and the software.

Gates. A step does not start until the decisions it needs are recorded:

Gate	Decisions recorded first
Before Part A is sent to reviewers (step 1)	I1, I2, I5, I12, I15
Before the panel decides the policy questions (step 4)	I3, I4, I6, I7, or a recorded decision to proceed without them
Before adjudication (step 6)	P1–P7, I8, I9
Before approved references are recorded (step 7)	I10, I11
Before any held-out run	I13
Standing	I14

If a decision is not made, the step it gates does not start. Cases waiting on it stay Pending, and the report lists the missing decision.

Notes

- **P1–P7** are set out in full, with options, in 01-academic-policy-questions.
- **I3 and I4** are needed before P3 and P6 can be settled on firm ground. If no description exists, P3 can still be decided (options A or B), but the references will rest on the names alone.
- **I5.** The nursing, education, accountancy and hospitality cases can still be reviewed as written. The reviewers are told that the cases are synthetic.
- **I8 and I9** affect scoring: a case with two accepted answers is scored differently from one with a single answer, and the choice must be recorded, not left to whoever converts the records.
- **I11** is separate from P5 and P6. It covers the general limits on what a proposed rewrite may change: level, subject, added content, removal.
- **I12** is needed before sending, because the forms collect a reviewer code and, if the institution asks, a name.
- **I13.** Faculty review of the held-out verdicts is the only way to make the final test meaningful. It must not expose those cases to the people who develop the software.
- **I15** does not presume that clearance or consent is needed. It asks the institution to decide, and to record the decision before any judgment is collected.
